

Aaron — Song-Fit Reference

What sits easy in your voice — your 47 songs, ranked from your own takes.

Each song is placed by how *you* actually sing it (your key, your recorded take), not the original artist. All figures are **raw measures** (always comparable — no scores). † = one take on file, so provisional.

Revised 9 Aug 2026 — the ranking model changed. The first version of this sheet assumed *low = easy, high = hard*. Measured evidence says that's only half right. Your **strongest zone is M2/mixed — core tessitura A3-B4 with the gear change around D4** — and your best-measured songs all live there. Songs that sit **lower** (E3-G4) aren't easier; they force constant register crossings, trigger the "Pitch Slider" scooping pattern, and measure *worse*. So a song is now placed on **where it sits relative to A3-B4**, how much register-crossing it forces, and breath-sag/drift as tie-breakers — not on height alone. See [memory/016-m2-mixed-strongest-zone.md](#).

The thing worth knowing about your own ears: you've said the M2/mixed sound doesn't feel great to you — "I'm not used to my M2 mixed voice." That's unfamiliarity, not inaccuracy. It is measurably where you are *most precise*. Trust the zone before you trust the feeling.

Easy — sit right in your pocket, walk up and sing

Song	most / top	Why
Do Wah Diddy Diddy †	B3 / E4	Sits ~B3, tops out E4 — right in your comfortable band.
My Babe	F3 / E4	Sits ~F3, tops out E4 — right in your comfortable band.
Funky Cold Medina	A3 / E4	Sits ~A3, tops out E4 — right in your comfortable band.
Rockin' Robin †	E4 / F4	Sits ~E4, tops out F4 — right in your comfortable band.
Carved from Stone †	A#3 / F#4	Sits ~A#3, tops out F#4 — right in your comfortable band.
Kung Fu Fighting	E4 / F#4	Sits ~E4, tops out F#4 — right in your comfortable band.
Kryptonite	B3 / F#4	Sits ~B3, tops out F#4 — right in your comfortable band.
Let's Stay Together	E4 / G4	Sits ~E4, tops out G4 — right in your comfortable band.
Twist and Shout †	F#4 / G4	Sits ~F#4, tops out G4 — right in your comfortable band.
The Letter	A#3 / G#4	Sits ~A#3, tops out G#4 — right in your comfortable band.
Working Class Man †	F#4 / A4	Sits ~F#4, tops out A4 — right in your comfortable band.
Two Strong Hearts †	E4 / A4	Sits ~E4, tops out A4 — right in your comfortable band.
Play That Funky Music	E4 / A#4	Sits ~E4, tops out A#4 — right in your comfortable band.
Pressure Down	F#4 / A#4	Sits ~F#4, tops out A#4 — right in your comfortable band.
Oh, What a Night — BEST TAKE	E4 / A#4	Your best-measured performance to date — sits square in the M2/mixed zone. Technically demanding (falsetto-led, ~61% head voice, frequent register flips) but you execute it best of anything: pitch centre, held-note stability and voice quality all maxed. Feels unfamiliar, measures superb.

Moderate — fine, with one thing to manage

Song	most / top	Why
3AM †	G3 / B3	Sits G3-B3, held notes drift (67c).
Lean on Me †	C4 / D4	Sits C4-D4, endings sag (61%).
Lose Control †	C#4 / E4	Sits C#4-E4, held notes drift (58c).
I'm a Believer †	D4 / E4	Sits D4-E4, held notes drift (75c).
Bad Things †	D#3 / E4	Sits low (C3-E4) — comfortable range; the only take is a drawly 2024 vocal-only, so its sag/drift read high (style, not range).
Stand by Me †	A3 / F#4	Sits A3-F#4, held notes drift (62c).
Goodbye's Been Good to You †	D4 / G4	Sits D4-G4, endings sag (65%).
Reasons	D4 / G#4	Sits D4-G#4, held notes drift (48c).
One	F4 / G#4	Sits F4-G#4, held notes drift (50c).
Believe It or Not †	E4 / G#4	Sits E4-G#4, held notes drift (61c).
The Heat Is On	C4 / A4	Sits C4-A4, held notes drift (53c).
Danger Zone	F#4 / A#4	Sits F#4-A#4, endings sag (69%).
Come Out and Play	E4 / A#4	Sits E4-A#4.

Hard — three different reasons

Sit **too high**, sit **too low** and **force register crossings**, or tax your **breath/steadiness**. The middle one is new in this revision — and it's the reason a low song can be harder for you than a high one.

Song	most / top	Best key	Why
Rebel Yell	E3 – G4 (core)	try up 2-3 (untested)	Sits too low. Your stylistic favourite, but the worst kind of fit: it lives under your strong zone and forces constant register crossings, which triggers the Pitch Slider scooping. Raising it toward A3-B4 is the obvious experiment — nobody has tested it yet. Sing it for love; don't judge yourself on it.
You Spin Me Round †	C#4 / C#4	—	Range is fine (C#4-C#4) — the cost is breath/steadiness (sag 90%, drift 80c), your weak spot.

Song	most / top	Best key	Why
Bye Bye Love	A3 / D4	—	Range is fine (A3–D4) — the cost is breath/steadiness (sag 73%, drift 90c), your weak spot.
Mustang Sally †	D4 / F4	—	Range is fine (D4–F4) — the cost is breath/steadiness (sag 50%, drift 112c), your weak spot.
Hammer to the Heart †	C#4 / F#4	—	Range is fine (C#4–F#4) — the cost is breath/steadiness (sag 73%, drift 43c), your weak spot.
You Sexy Thing	F4 / G#4	—	Range is fine (F4–G#4) — the cost is breath/steadiness (sag 74%, drift 46c), your weak spot.
Livin' on a Prayer	E4 / C5	down 1 → top B4	Tops out C5 — above your comfortable ceiling; drop it down 1 to bring the top to B4.
Tutti Frutti	F4 / D5	down 3 → top B4	Tops out D5 — above your comfortable ceiling; drop it down 3 to bring the top to B4.
Get Up (Sex Machine) †	D#4 / E5	down 5 → top B4	Tops out E5 — above your comfortable ceiling; drop it down 5 to bring the top to B4.

Not ranked — and why (10)

Song	Status
Beggin'	Range unreadable — pitch tracker octave-locked onto the backing (bright voice reading as bass). Needs a clean vocal-stem re-analysis. <i>Not a hard song — these score well.</i>
Sex Bomb	Range unreadable — pitch tracker octave-locked onto the backing (bright voice reading as bass). Needs a clean vocal-stem re-analysis. <i>Not a hard song — these score well.</i>
Don't Be Cruel	Range unreadable — pitch tracker octave-locked onto the backing (bright voice reading as bass). Needs a clean vocal-stem re-analysis. <i>Not a hard song — these score well.</i>
Sunshine Smile	Range unreadable — pitch tracker octave-locked onto the backing (bright voice reading as bass). Needs a clean vocal-stem re-analysis. <i>Not a hard song — these score well.</i>
Lonely Boy	Range unreadable — pitch tracker octave-locked onto the backing (bright voice reading as bass). Needs a clean vocal-stem re-analysis. <i>Not a hard song — these score well.</i>
Wild Thing	Range unreadable — pitch tracker octave-locked onto the backing (bright voice reading as bass). Needs a clean vocal-stem re-analysis. <i>Not a hard song — these score well.</i>
She's Not There	Anomalous dark reading (centroid 585 Hz); range uncertain — verify by ear / re-analyse.
Creep	Historical learning take (May 2025) — now analysed and archived, but deliberately outside the current benchmark set, like the 2019/2024 takes. Sung low (core F3–G4, most-used G3); range was never the issue — held-note drift was (89 cents, vs ~31c on your current takes). A useful "before" picture, not a current ranking.
You Can Leave Your Hat On †	Removed from Hard — the F5 was backing-vocal bleed, not you. The take's ceiling was inflated by the "you can leave your hat on" backing singers leaking into the vocal stem; what you actually sing sits low and talky (most-used C4), and Joe Cocker's own lead is only B3–A4. Needs a clean solo-vocal re-analysis before it can be ranked honestly.
Only You	Withheld — separation failed, analysis ran on the full mix; score and vocal metrics withdrawn, needs a rerun.

Best-key = semitones of karaoke key change. **Down** for songs whose sustained top sits above your reliable ceiling (~B4). **Up** for songs sitting below your strong M2/mixed zone, to move the tessitura toward A3–B4 — that direction follows from [memory/016-m2-mixed-strongest-zone.md](#) and has not been tested yet; treat it as an experiment to record, not a settled recommendation.
